## Profile

ALL4IP TECHNOLOGIES is an early stage, high potential, growing engineering company. We focus on Industrial Applications for Locating and Wireless Communication,

realized in Internet Technology with User self administration and selected services.

## Products and Services

One of our products is a Charge Information System for Electrical Vehicles (CHARGELL). By using GPS/EGNOS/Galileo services, CHARGELL supports localizing and communication of current position of electrical vehicles. Based on the GNSS position and by detecting the status of the traction battery

stage, we calculate and visualize the accessibility range of the electrical vehicle. One of the most important aspects is the point of no return. The user is continuously informed about his possibility to return to the designated destination.
