

BENJAMIN

ESA Business Incubation Centre Darmstadt managed by cesah

Profile

Founded 2009 in Braunschweig, Germany, benjamin GmbH provides a brand new technology in the logistics industry. We utilize IT-controlled, highly adaptable products in domestic logistics significantly increasing the performance in storage,

handling procedures and manufacturing. Applications and development projects are performed in the Roßdorf/Darmstadt Office and in the House of Logistics and Mobility established in Frankfurt Airport in 2010.

Products and Services

Fluid Logistics is a dynamic, flexible, environment-friendly novel turn key technology which allows for the individual access to a highly adaptive, fully automated, on-demand, "just in sequence" material flow. It will intelligently adapt its technology to a wide range of ever-changing situations, processes and needs in real time. Furthermore, storage, handling, and production can take place at significantly increased speed; thus requiring consider-

ably less space and resources. The main concept is based on contactless actuation via electromagnetic fields. Significant increase in power and resource in addition to savings in storage, handling and manufacturing sectors. Space savings range approximately 60% and Cost savings range approximately 70%.
