

PUNCHBYTE

ESA Business Incubation Centre Darmstadt managed by cesah

Profile

German company Punchbyte develops software for public administration and industrial customers. The main focus is on software systems for control, maintenance and quality management. Unique features of these solutions are software,

that a) runs on every standard Laptop or PDA, that b) is easy to use – without computer literacy as well as data that can be synchronized between devices and via internet.

Products and Services

Punchbyte g-diag is a satellite-navigation-based software system for inspection and maintenance. Everywhere in the world there are parts of buildings, bridges, industrial and chemical plants, playgrounds etc., which need regular maintenance and inspection. With g-diag, inspections are carried out by using a database and a Galileo receiver for

finding an equipment. The software serves all data online, uses active equipment, which activates an inspection in case of exceeding a default location and documents position and time. The g-diag system developed by Punchbyte uses GPS and EGNOS to make maintenance work effective and technical equipment secure.
